PUB-NO	APPL-DESCRIPTOR	APPL-NO	APPL-DATE
JP06346014A	N/A	1993JP-0134888	June 4, 1993

INT-CL (IPC): C09D011/18

ABSTRACTED-PUB-NO: JP06346014A

BASIC-ABSTRACT: Ink compsn. consists of pigment component (A); glycol-type organic solvent (B); alkali thickening emulsion (C) and alkaline component (D).

Also claimed is an aq. ball point pen ink compsn. consisting of alkaline pigment compsn. (A'), (B), (C) and opt. (D).

Examples of (C) are acrylic, styrene/acrylic and polybutadiene type O/W emulsions which contain carboxylic gps. and thicken with alkali. Examples of (D) are NaOH, KOH, Na₂CO₃, NaHCO₃, Na acetate, KH₂PO₄, ammonia, aminoalcohols,

morpholine and aliphatic amines. Examples of (A) and (A') are dispersions of pigments stabilised with polymer dispersant, opt. contg. alkaline cpd. for solubilising polymer dispersant. A suitable amt. of (A) or (A') is 30-70 (35-65, 40-60) pts. wt. Examples of (B) are ethylene glycol, diethylene glycol, glycerine, diglycerine, PG, DEG, PEG, 1,3-butylene glycol, thiodiglycol, hexylene glycol. Suitable addn. amt. of (C) is such an amt. that

the ink compsn. thickens to 200-5000 (300-4000, 500-3500) mPa.s with (D) and generally 0.01-10.0 (0.05-5.0, 0.1-3.0) pts. wt. in 100 pts. wt. of the ink

compsn. Suitable addn. amt. of (D) is such that pH value of ink becomes higher than 8 (9), pref. between 9.5-10.5.

ADVANTAGE - Ball point pens filled with aq. ball point pen compsn. exhibits good ink flowability at pen tips without causing dripping of ink and therefore good writing properties.

ABSTRACTED-PUB-NO: US 5951188A

BASIC-ABSTRACT: Prepn. of an ink compsn. comprises (1) mixing a film forming polymer, a pigment, water and an oil to form an ink precursor, and (2) processing the ink precursor in a homogeniser to form a microemulsion. Also claimed is (a) the same prepn. to form an ink contg. a pH dependent thickener,

a base, a pigment, water and an oil and (b) the prepn. comprising the steps (1)

mixing an oil and water to form a mixt., (2) processing the mixt. in a homogeniser to form an oil-in-water emulsion, and (3) blending the emulsion with a pH dependent thickener, a base, a pigment and water.

USE - The ink is used in pens (claimed) esp. ball point pens . The ink has good

permanency, long cp-off times, high writing intensity, smooth writing characteristics, consistent ink flow and long shelf life.

ABSTRACTED-PUB-NO: US 5969004A

EQUIVALENT-ABSTRACTS: Prepn. of an ink compsn. comprises (1) mixing a film forming polymer, a pigment, water and an oil to form an ink precursor, and (2)

processing the ink precursor in a homogeniser to form a microemulsion. Also claimed is (a) the same prepn. to form an ink contg. a pH dependent

thickener,
a base, a pigment, water and an oil and (b) the prepn. comprising the steps
(1)
mixing an oil and water to form a mixt., (2) processing the mixt. in a
homogeniser to form an oil-in-water emulsion, and (3) blending the emulsion
with a pH dependent thickener, a base, a pigment and water.

USE - The ink is used in pens (claimed) esp. ball point pens.. The ink has
good
permanency, long cp-off times, high writing intensity, smooth writing
characteristics, consistent ink flow and long shelf life.

Prepn. of an ink compsn. comprises (1) mixing a film forming polymer, a
pigment, water and an oil to form an ink precursor, and (2) processing the
ink
precursor in a homogeniser to form a microemulsion. Also claimed is (a) the
same prepn. to form an ink contg. a pH dependent thickener, a base, a
pigment,
water and an oil and (b) the prepn. comprising the steps (1) mixing an oil and
water to form a mixt., (2) processing the mixt. in a homogeniser to form an
oil-in-water emulsion, and (3) blending the emulsion with a pH dependent
thickener, a base, a pigment and water.

USE - The ink is used in pens (claimed) esp. ball point pens . The ink has
good
permanency, long cp-off times, high writing intensity, smooth writing
characteristics, consistent ink flow and long shelf life.

INT-CL (IPC): C09D011/00

ABSTRACTED-PUB-NO: JP59041369A

BASIC-ABSTRACT: Ink compsn. (I) consists of a colouring matter (II), an alcohol solvent (III), an alcohol-soluble resin (IV) and a hydroxyalkylpyridine deriv. of formula (V). In (V), R is H or 1-4C alkyl and n is 1-4.

(II) is e.g. an alcohol-soluble dye such as C.I. Solvent Yellow 1, 3, 13 or 34

on an alcohol-soluble resin-treated pigment e.g. 'Fuji AS Colour' (RTM).

(III)

is e.g. methanol, ethanol, ethylene glycol monoethyl ether or ethylene glycol monobutyl ether. (IV) is pref. e.g. phenol resin, ketone resin or rosin (deriv.) (V) is e.g. propanolpyridine, ethanolpyridine or pyridinecarbitol.

(I) produce no whitening due to deposition of resinous component or blinding within a pen point. It is suitable for use in writing tools (e.g. marking pens) or stamps.

INT-CL(IPC): C09D011/16

ABSTRACTED-PUB-NO: JP59170166A

BASIC-ABSTRACT: The ink is obtd. by homogeneously mixing an organic solvent and

a pigment which has been previously surface-treated with a methyl hydrogen polysiloxane.

USE/ADVANTAGE - Since the ink pigment has excellent affinity and dispersibility with the organic solvent, the ink causes less pigment sedimentation and is provided with rapid restoration and flowability, after 30 days, giving fresh colour and no colour unevenness.

In an example, the ink compsn. comprised (in pts. wt.): surface-treated rutile-type titanium white 100.0; methyl hydrogen polysiloxane 2.0; trichloroethylene 100.0; and dibutyl tin diuralate (sic) 0.2. The compsn. was

homogeneously mixed for about one hour, wind-dried to blow off trichloroethylene, and then put into a dryer and heated for about one hr. at about 100 deg. C.

JP06080924A	N/A	1992JP-0253451	August 31, 1992

INT-CL (IPC): C08K009/02; C09B067/08 ; C09C003/00 ; C09D011/16 ;
G03G009/12

ABSTRACTED-PUB-NO: JP06080924A

BASIC-ABSTRACT: Recording material contains pigment (A) surface-treated pref.

at (-)80-(+)50 deg.C with fluorine contg. gas. An ink compsn. contg. (A),
solvent (B) and binder resin (C) is also new.

Pref. (A) is obtd. by surface treating organic and/or inorganic pigment for
0.5-60 min. with fluorine gas or a mixt. of fluorine gas and inert gas of
1-760

mmHg. (B) is mixts. of water and water-soluble organic solvent(s) selected
from polyhydric alcohols like EG and glycerin, glycol ethers like monoethyl
ether of EG or DEG and glycol ether esters like monoethyl ether acetate. (C)
may be selected from the gps. of water-soluble resins like water-soluble
acrylic, styrene/acryl , styrene/maleic acid copolymers and water-dispersible
resins like emulsions of vinyl acetate and acrylic acid copolymers. A
suitable

(A)/(B)/(C) wt.% ratio is 3-30/40-80/1-20. This recording material may
contain

additionally a lubricant, a pH adjuster, a rust preventive and other
conventional additive(s).

USE/ADVANTAGE - The recording material is suitable as an ink compsn. for
ballpoint and sign pens . Even when stored for a long period, it scarcely
caused agglomeration and pptn. of pigment. Therefore, ballpoint pens and
sign

pens filled with the recording material do not cause clogging of pen tips
and

realise good writing properties.

TITLE: Aq. ball point pen ink compsn. providing good ink flow - comprises e.g.

pigment dispersions, ethylene glycol, acrylic emulsions and opt. sodium hydroxide

ABSTRACTED-PUB-NO: JP06346014A

BASIC-ABSTRACT: Ink compsn. consists of pigment component (A); glycol-type organic solvent (B); alkali thickening emulsion (C) and alkaline component (D).

Also claimed is an aq. ball point pen ink compsn. consisting of alkaline pigment compsn. (A'), (B), (C) and opt. (D).

Examples of (C) are acrylic, styrene/acrylic and polybutadiene type O/W emulsions which contain carboxylic gps. and thicken with alkali. Examples of (D) are NaOH, KOH, Na₂CO₃, NaHCO₃, Na acetate, KH₂PO₄, ammonia, aminoalcohols,

morpholine and aliphatic amines. Examples of (A) and (A') are dispersions of pigments stabilised with polymer dispersant, opt. contg. alkaline cpd. for solubilising polymer dispersant. A suitable amt. of (A) or (A') is 30-70 (35-65, 40-60) pts. wt. Examples of (B) are ethylene glycol, diethylene glycol, glycerine, diglycerine, PG, DEG, PEG, 1,3-butylene glycol, thiodiglycol, hexylene glycol. Suitable addn. amt. of (C) is such an amt. that

the ink compsn. thickens to 200-5000 (300-4000, 500-3500) mPa.s with (D) and generally 0.01-10.0 (0.05-5.0, 0.1-3.0) pts. wt. in 100 pts. wt. of the ink

compsn. Suitable addn. amt. of (D) is such that pH value of ink becomes higher than 8 (9), pref. between 9.5-10.5.

ADVANTAGE - Ball point pens filled with aq. ball point pen compsn. exhibits good ink flowability at pen tips without causing dripping of ink and therefore good writing properties.
